DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3 are rejected under 35 U.S.C. 102(a) as being anticipated by Tansini (EP 1302581).

Tansini (EP 1302581) teaches the compound needle as claimed including a needle body (2) having a hook (3) and blade grooves (10, 11) with a partition wall (Figure 17) between them, the hook being provided at a front end of the needle body; and a slider (4) including a pair of blades(12, 13), the blades being movable back and forth in the blade grooves, wherein front ends of the two blades are opened toward left and right, and the blades include curved portions curved inwardly on a backside of the front ends of the blades, and wherein the partition wall has a non-uniform thickness in a longitudinal direction including: a relatively thick section on a front end side of the blade grooves; and a relatively thin section or a cutout section on a backside of the thick section. See figure 8. Re claim 2, note the thickness of the partition wall is relatively thin on the backside. Re claim 3, note the two blades move back into the blade grooves, the curved portions contact the thick section or the cutout section of the partition wall.
